

PRODUCT SHEET : Perdelle NEO

The NEO equipment is designed for seated and/or standing workstations.

Its powerful and highly compact clamp ensures secure fastening. Make sure your support surface is solid. Its flexibility allows installation directly on your workbench or anywhere around your workstation, for example on the sides of the workbench, on a wall bracket, or on a machine frame. NEO can even be mounted behind you.

Releasing the arc locking handles provides a larger working area when needed. NEO can be installed on a height-adjustable workbench, allowing it to support your movements regardless of your height or whether you are working seated or standing.

Reading the assembly instructions is mandatory and can be accessed via the QR code below or in the Perdelle-Neo section of the main menu on the website: perdelle.com
