

PRODUCT SHEET: Perdelle TAYA

The TAYA equipment is designed for seated workstations.

Made of beech wood sourced from the forests of Franche-Comté, it is perfectly suited to the leather goods and sewing industries. Its natural composition also allows it to integrate easily into semi-public environments such as podiatry clinics.

Its key strengths: the warmth of the wood provides a soft touch and a particularly appealing aesthetic within workshops. Its carbon footprint is half that of the Swan and Neo models. In addition, TAYA is pre-assembled in its case, making installation easier.

Reading the assembly instructions is mandatory and can be accessed via the QR code below or in the Perdelle-Taya section of the main menu on the website: perdelle.com
